(54) **ANTIGRAVITY GENERATOR**

COPYRIGHT: (C)2000,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a contamination-free antigravity generator using no fuel.

SOLUTION: Five elliptic-cylinder-shaped slide ball cases are combined into a meteor flywheel set 4 with the slide ball cases offset with respect to each other by an inclination angle of 36 degrees. A hollow slide ball 45 is placed in each slide ball case, and a solid inner ball 46 is placed in each slide ball. The meteor flywheel set 4 is actuated by a driving motor 10, and the slide balls are continuously rolled within the slide ball cases, whereby the meteor flywheel set is continuously rotated. That rotation force causes a rotation shaft 20 of a generator 2 to rotate, thereby generating electricity.
